By implementing online health check-ups and providing online medication guidance following the instructions of the Ministry of Health , Labour and Welfare of Japan, Japanese healthcare agencies are able to prescribe and manage medications for foreign patients. The medications are delivered from the pharmacy through private exportation channels.

Materials that the patient needs to prepare

To register for online medical advise service , you need to prepare the information as below .

Please send us the original document in a foreign language , we will do the translation

- Application for medical coordination services/ patient’s information
- Image data in DICOM format from your hospital in local and most recent (CT , MRI , X-ray , PET-CT ,...)
- Information about treatment at your hospital in local
(for example : Surgical records, admission and discharge records, pathological diagnosis results, blood test result, chemotherapy records, radiation therapy records...)
- Drugs are being used

What is DICOM

DICOM is the standard electronic image information format of CT, MRI , PET-CT ... it is used worldwide , mainly to export , storage , share , display , transmit , retrieve query ,search and print image data .It plays an important role when being treated at different hospitals in the country and when visiting hospitals abroad. Doctor just give a second opinion and appoint the appropriate treatment after confirming various detail information which showed in DICOM

How to get DICOM’s data

Ask your doctor , radiologist , data management staff . In general ,DICOM format images should be provided in DISC or by USB memory . Recently the trend of issuing a QR code and a patient’s personal URL and accessing it is increasing in many foreign hospitals. The accepting hospitals in Japan is quite limited for this case , so please send us in advance.

How to send DICOM’s data

After receiving the DICOM’s data compress the file to RAR or ZIP then send us via medical@conomity.co.jp .

Or send to the [above email](#) via online storage service.

In case impossible send via email , kindly send by EMS along with other medical information. In case of My page format , you can also send URL or QR code via SNS chat.

II Support for medical visa application / coordination before coming to Japan

- We provide thoughtful services so that you can be treated smoothly in Japan

Medical visa

There are 3 main types of medical visas : single time , multiple time in 1 year ,multiple times in 3 years. All categories have a 90 day period of stay . All of them can applied for extension if conditions are met.

Conomity as a sponsor we provide the following services to make it possible to get a single time visa and multiple time visa (base on your condition)

- Cooperate with medical organ to receive and issue guarantee documents
- Originals will be sent to the address specified by the patient by international couriers such as EMS and FedEx...
- Support for patient or representative applies for a visa

Coordination

- Coordinate with hospitals or clinics : confirm/negotiate availability ,confirm expected treatment cost and treatment plan , adjust appointment, translate and submit documents
- Quotation and arrangement of necessary services base on patient’s requirement such as transportation , accommodation ,medical interpreter, travelling schedule ..

In step 5 and 6, it will be proposed and evaluated treatment plan/methods

Cancer immunotherapy... "the 4th cancer treatment method"

With the three main treatments, immunotherapy is being attention as the 4th cancer treatment method. Immunity is the ability that people are equipped from birth to fight off allergies entry into the body. Cancer immunotherapy bring out the best this and it is very useful in cancer treatment. However, the same "immunotherapy" includes some that have been shown to to be effective and covered by insurance ,while others have not been confirmed to work , so careful validation is required .

Immunotherapy has been limited to a few drugs such as immune checkpoint inhibitors that act on the mechanism of "cancer cells suppressing the immune system" and certain types of cancer. Cancers which recognized as effective treatment are still limited now . Other unrecognized treatments are done mainly in private clinics. It is a treatment in which immune cells are isolated from the patient's body ,cultured and enhance outside the body then returned to the body to strengthen the immune system's attack power. Currently, various types of immunotherapy are being done in Japan.

We will collect information such as the mordenest immunotherapy,the treatment which appropriate the patient's symptoms and condition , after consulting a doctor who will recommend the most effective treatment , no matter standard treatment regenerative medicine.

Some our currently partner

- The basis of heavy ion beam therapy , proton beam
- University hospitals/General hospitals
- Specialist clinics
- Regenerative medicine clinics

In case you want to come back to Japan for treatment , we can handle .

1 The effectiveness and safety of treatment in Japan is among the top in the world

- Japan's cancer and circulatory system disease treatment results are excellent (the 5-year survival rate is among the top in the world)
- High-quality medical services can be obtained at any medical facility

2 You can get the world's advanced medical technology

- Many technologies are originated and developed in Japan such as heavy ion beam radiation therapy, regenerative medicine, general health check-up
- Regarding heavy ion radiotherapy, half of the world's heavy ion radiotherapy facilities are settled in Japan and Japan has led the world in both clinical research achievement and technology.

3 Examination results have high accuracy, because the disease can be detected in the early stage, so it can be treated with effective methods in the early stages

- Disease's name can be diagnosed accurately and quickly
- Advanced testing equipments are available
- High skilled medical staff
- Medical equipments have maintained frequently

4 Follow-up after examination, considerate care, rehabilitation are performed thoroughly

- Advantages in follow-up after examination and treatment
- High level of satisfaction of rehabilitation patients
- Many foreign patients feel grateful with the courteous of medical staffs

5 Due to strictly hygiene management, hospital has a clean environment and patients are treated with peace of mind

- Bed/bed sheets have been disinfecting frequently
- Other facilities which not belong to medical have been maintained in a comprehensive clean environment.

6 Doctor explains the diagnosis/treatment guidelines and results carefully, so the patient can be treated with peace of mind

- The results have been explained in detail by doctors
- The reason for the meticulousness is to have confidence backed by a scientific basis
- Doctors have responsible explain to patients make clear

7 The distance between Japan and Asia countries

- The distance between Japan and China is around 3 hours by flight, 6 hours between Japan and Vietnam
- In addition, Japan is famous for mineral water and healthy Japanese cuisine are also one of the reason for Japan to become an attractive tourist destination

8 The treatment costs are clearly explained, so the transparency of payment is high

- The fee for each test has been prescribed, the patient can confirm that fee
- In general, the medical tourism service provider will also present to the patient a detailed fee that has been issued by the medical agency.

Foreign patient/family...
